----- Overall evaluation -----

SCORE: 3 (strong accept)

----- TEXT:

1. in this article the structure is clear and the language is easy to understand, but there needs to be some reinforcement in the statement section 2.2. Learning model in educational robotics, which needs to be added to the reference, not just one reference.
2. In the Methods that used the Comprehensive Literature Review (CLR), this should be given a time limit for articles reviewed related to the topic raised.

TITLE: Do Educational Robotics Competitions' Impact on Students' Learning?

AUTHORS: I Gusti Putu Asto Buditjahjanto, Muhammad Syariffuddin Zuhrie, Luthfiah Nurlaela and Ismet Basuki

----- Overall evaluation -----

SCORE: 1 (weak accept)

----- TEXT:

There are a few issues that the authors could consider for an improvement of the research. Is the motivation part of learning included in the study? It is important that this study focuses on two comparisons. The first one is between what skills should be obtained (both technical and non-technical skills) and what actual skills have been obtained by students. The second comparison is between these actual skills and other previous findings. The first comparison can help with the validity of the intended teaching and learning while the second comparison can help with the development of a lesson plan.
