Dear Author

Thank you for your submission.

We sent your article to our reviewers and in 10 days we should have their reply.

If I only have information I will send it to you.

Your article has system number FPM0789/2023

Kind regards,

Dariusz Jasiriski

Dear Author,

I am sorry, we have a little delay, because of our winter holiday.

The cost of publication is 980 PLN (there will be no additional costs).

We can send you the revision after we receive payment.

You can pay by card (through our shop, we send you link), bank transfer (in this case write us which currency do you prefer USD, EUR or PLN).

If you need an invoice - of course I can prepare it.

Kind regards,
Dariusz Jasirski

MASUKAN REVIEWER

Purpose: The COVID-19 outbreak had led difficulties in carrying out sports events and limited research investigated the strategies in organizing sports events during COVID-19 generated a gap and novelty in this research. Therefore, this study aims to investigate the perceptions from coaches about strategies in organizing sport events at the university level.

Material and Methods: This research used a qualitative with phenomenological method. Participants involved in this study were coaches who had experience in organizing sports events, which came from the State University of Surabaya (Indonesia) (n=5) and the University of Pecs (Hungary) (n=5). This study used in-depth interviews with participants during 30 minutes. Data was analyzed using qualitative thematic statistical, namely copying, understanding the text and coding into three themes

Results: The results indicate that most of the coaches applied various strategies in organizing sports events, for example limiting the number of participants, implementation time, physical distancing, using masks and hand sanitizers. In addition, they argued that technology and funding were supporting factors to assist the success in organizing sports events. Apart from that, it was necessary to minimize the inhibiting factors in order to optimize the implementation.

Conclusions: Thus, this study confirms that to achieve the success in organizing sports events at the university level, it is necessary to consider the strategies and supporting factors. This research contributes to existing knowledge by providing information and scientific insight to coaches, athletes and stakeholders, to implement the appropriate strategy in organizing sports event during the COVID-19 pandemic crisis.

Keywords: Coach's Perception, Organizing Sports Strategy, Phenomenological Method

Introduction

The COVID-19 pandemic crisis which happened from 2019 until now, has caused millions

add relevant research results regarding the implementation of activities before the pandemic, are there any differences?

sports events" (Interviews with P4, P7, P8, P9).

"A committee which has a low level of readiness will have an impact on the implementation of sports events. For example, many participants were exposed to COVID-19 and the competition did not accordance to schedule" (Interview with P1, P2, P5, P10).

"The readiness of the committee, especially the chairman of the committee, is a determining factor to ensure the sports events are conducted without any obstacles at the university level during COVID-19. Several obstacles often arise when the committee do not have any preparation, such as the program of activities not running, many participants protesting and resigning from the activity" (Interviewed with P3, P6).

Discussion

Our study aims to investigate strategies for organizing sports events at university level during the COVID-19 period from coaches' point of view.

The findings in this study indicated that the majority of coaches' perceptions emphasized to apply the right strategy in organizing sports events in a pandemic crisis. The first strategy was applying a relatively small number of participants so that facilitated the committee in controlling
